Work Experience

Software Engineer Intern - Infosys Springboard

Feb 2026 - April 2026

- Built **TripNest**, a tourism booking web app in Angular supporting **50+** destinations, structured as an SPA for simpler navigation
- Paginated destination listings to cut initial **page load time by 50%**, with added search, filtering, and sorting for faster discovery
- Configured **Firestore** authentication with **Angular Auth Guards** to restrict booking and payment access to verified users, with sessions persisting across page refreshes
- Integrated **Razorpay** for payments with real-time pricing (traveler count, fees, taxes) and multiple checkout methods
- **Tech Stack:** Angular, TypeScript, HTML, CSS, Firebase, Razorpay SDK

Technical Skills

Languages: JavaScript (ES6+), Java, TypeScript, HTML, CSS, SQL

Frameworks / Libraries: React, Node.js, Express, Angular, Zustand, DaisyUI, Tailwind CSS

Tools / Platforms: Git, GitHub, Postman, Thunder Client, Vercel, Render, Razorpay, Firebase

Databases: MongoDB (NoSQL), Firestore (NoSQL)

Core Concepts: Data Structures and Algorithms, OOP, DBMS, OS, CN, Software Development Life Cycle

Projects

Prescripto – Smart Healthcare Management Platform [GitHub](#) [Live](#)

Jan 2026

- Engineered a full stack web app where patients can search doctors, book appointments, and pay online, cutting booking time from **15 min to under 2 min**
- Implemented **role based authentication** for patients, doctors, and admins using **JWT**, with middleware checking access on every route
- Created **15+ REST APIs** in Node.js and Express.js for scheduling, doctor management, and user profiles, backed by **MongoDB**
- Used **Cloudinary** for image storage and **Razorpay** for payments across **3 user portals** and **6 medical specialties**
- **Tech Stack:** React, Node.js, Express, MongoDB, Tailwind CSS, JWT, Cloudinary, Razorpay, Vercel

Chatty – Real Time Communication Platform [GitHub](#) [Live](#)

Nov 2025

- Built a real time messaging app for instant user to user communication, with message delivery **under 1 second** using Socket.IO
- Applied **JWT based authentication** to secure user sessions and protect communication across the platform
- Established an event driven backend with **Socket.IO** to handle live messaging and track user connect or disconnect events
- Added **real-time online/offline status tracking**, improving interaction clarity and cutting communication delays by **approximately 40%**
- **Tech Stack:** React, Node.js, Express, MongoDB, Socket.IO, JWT Authentication, Tailwind CSS, Render

Education

Sri Venkateswara College of Engineering, Tirupati

Sept 2022 – April 2026

B.Tech in Computer Science - [CGPA: 9.1/10]

Achievements & Certifications

- Solved 500+ Data Structures & Algorithms problems on [LeetCode](#) 2026
- The Complete Full-Stack Web Development Bootcamp [Udemy](#) 2026
